B.S. Computer Engineering – Purdue University, May 2022

Portfolio: <https://veddave.com> • LinkedIn: <https://www.linkedin.com/in/veddave/>

WORK EXPERIENCE

Liventful — *Founder* — <https://liventful.com> April 2026 – Present

- Building a mobile-first event operations platform for independent event hosts.
- Custom whitelabeled branding to empower hosts to own their own community.
- Ticketing and AI powered analytics to support growing creators and organizers.

Microsoft — *Software Engineer* — *Dynamics 365 CRM, Omnichannel Messaging* Aug. 2022 – March 2026

- Designed and deployed agentic workflow for automated E2E test generation, with org wide scope across immediate and sister teams
 - Built an agent that synthesizes E2E tests directly from feature branch PRs, enabling developers to review and commit generated tests alongside their features
 - Second agent continuously monitors PRs and auto-generates weekly coverage reports and E2E test pull requests on identified coverage gaps
 - Built custom dashboards and metric logging infrastructure for easy org-wide leadership visibility into test coverage
 - Empowered the organization to match AI-driven development velocity with AI-powered E2E validation
 - Reduced QA costs by 70%, cut SDP rollout calendar in half, while improving service reliability from 4 to 5 nines
- Contributed to redesign of large-scale CRM SaaS infrastructure migration to BAP Core Services – specifically led implementation of attachment/file sharing service and public Messaging APIs for native client integrations
- Partnered with Microsoft Dynamics' highest-priority customers on Solution Engineering – swift delivery of features from direct user feedback and quick mitigation and communication during on-call incidents.

Microsoft — *Software Engineer Intern* — *Dynamics 365 CRM, Omnichannel Messaging* May 2021 – Aug. 2021

- Built APIs bridging Dynamics Omnichannel and Bot Framework to enable end-to-end messaging through Microsoft Teams agents
- Designed and implemented a Teams application interfacing with the Omnichannel APIs; demonstrated proof of concept at MS internal expo

Lunchbot — *Software Engineer Intern* June 2020 – Aug. 2020

- Built React Native app for an enterprise catering delivery startup, including responsive UI, authentication pipeline, and user data queries via SQL over Google Firestore

SKILLS

Competencies: Agentic Workflows • System Design • API Design • Distributed Systems • LLM Integration • Prompt Engineering • CI/CD • Solution Engineering • Developer Tooling • Technical Customer Engagement

Platforms & Tools: Azure • AWS • Cloudflare • .NET • CosmosDB • MongoDB • Claude • Gemini • GPT-4 • Copilot

PROJECTS

MapLinky — Universal Map Link Converter | <https://maplinky.veddave.com/>

- Built maplinky to auto-detect and convert map links across Google Maps, Apple Maps, and OpenStreetMaps
- Backend runs on a Cloudflare Worker with Gemini handling the link parsing; vanilla JS on the frontend

TinyChain — Blockchain System for IoT Devices | Purdue Senior Capstone

- Forked the open-source "iroha" blockchain and stripped it down to run on resource-constrained IoT hardware
- Ran the whole thing on six Raspberry Pis — used LED triggers to simulate real IoT device behavior and demonstrate the ledger recording live at the Purdue Senior Design Expo

TensorFlow Model Garden — VIP Research Lab, Google Partnership

- Worked with Google through Purdue's VIP program training YOLO-based object detection models; built a new data pipeline to handle YOLOv3 constraints and integrated it into the TensorFlow Model Garden
